### Room Temperature Setpoint (RTS)

1

#### Summary

This function generates the setpoint value of the room temperature for a single room. The temperature control bases on the mode of operation and other Inputs.

Version 01.00.01 is a KNX Approved Standard.

This document is part of the KNX Specifications v2.1.

## Document updates

Version	Date	Modifications
1.0	2002.04.02	Editoriall restyled, based on "03-02_ObIS_RTS.doc".
1.0	2009.06.15	Editorial update in view of inclusion in the KNX Specifications v2.0.
01.00.01	2013.10.29	Editorial updates for the publication of KNX Specifications 2.1.

## References

None.

## 2 ObIS Function Model(s)

### 2.1 ObIS Function Model "Room Temperature Setpoint"

#### 2.1.1 Aims and objectives

This function generates the setpoint value of the room temperature for a single room. The temperature control bases on the mode of operation and other Inputs.

#### 2.1.2 Functional specification

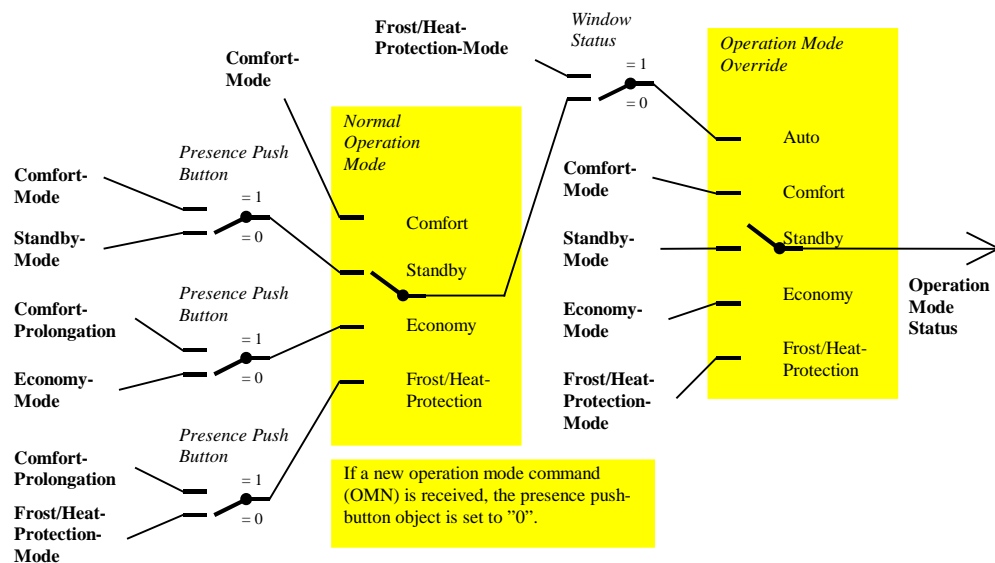

Figure 3 - Operation Mode Diagram, if UCPS = Presence Push Button

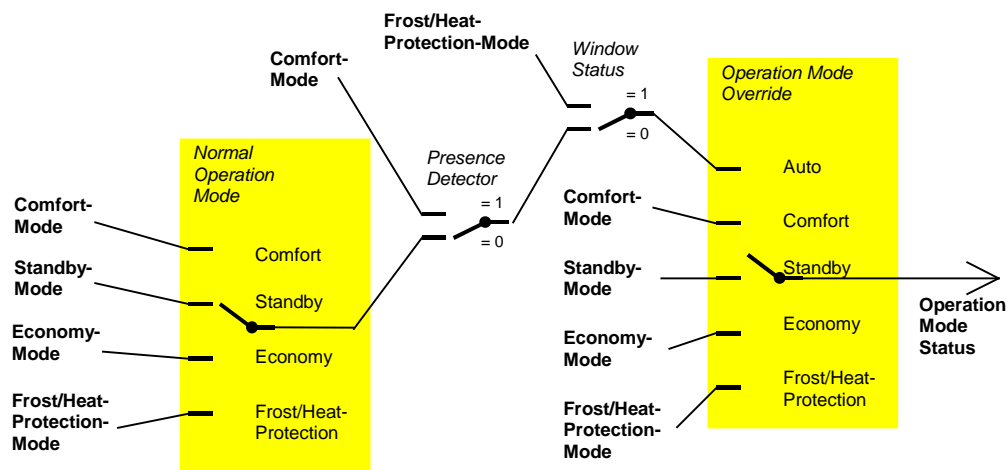

Figure 4 - Operation Mode Diagram, if UCPS = Presence Detector

This functional specification is mandatory. Other additional functional specifications are allowed.

**Table 1 - Actual Temperature Setpoint Value if PDB = 0**

Operation Mode (OMN)	Actual Temperature Setpoint Value Heating (ATSVH)	Actual Temperature Setpoint Value Cooling (ATSVC)
Comfort-Mode	BSV + SCV – ½ DBHC	BSV + SCV + ½ DBHC
Standby-Mode	BSV + SCV + SRV – ½ DBHC	BSV + SCV + SIV + ½ DBHC
Economy-Mode	BSV + SCV + ERV – ½ DBHC	BSV + SCV + EIV + ½ DBHC
Frost/Heat-Protection-Mode	FPSV	HPSV

**Table 2 - Actual Temperature Setpoint Value, if PDB = 1**

Operation Mode (OMN)	Actual Temperature Setpoint Value Heating (ATSVH)	Actual Temperature Setpoint Value Cooling (ATSVC)
Comfort-Mode	BSV + SCV	BSV + SCV + DBHC
Standby-Mode	BSV + SCV + SRV	BSV + SCV + SIV + DBHC
Economy-Mode	BSV + SCV + ERV	BSV + SCV + EIV + DBHC
Frost/Heat-Protection-Mode	FPSV	HPSV

### 2.1.3 Constraints

No constraints are defined for the ObIS Room Temperature Setpoint.

## 2.1.4 Functional Block

<u>Input(s)</u>		<b>Room Temperature Setpoint</b>		<u>Output(s)</u>	
Basic Setpoint Value	DPT 9.001 -----	BSV	ATSVH	DPT 9.001 -----	Actual Temperature Setpoint Value Heating
Setpoint Correction Value	DPT 9.001 -----	SCV	ATSVC	DPT 9.001 -----	Actual Temperature Setpoint Value Cooling
Normal Operation Mode	See 3.1 -----	OMN	OMS	See 3.1 -----	Operation Mode Status

## Remarks

### M\*

In new developments this object has to be implemented. The objects „comfort mode“ CM, „standby mode“ SM, „economy mode“ EM and „frost/heat protection mode“ FHPM may be implemented additionally. But if implemented, the parameter „type of operation mode control“ TOMC has to be implemented, too.

### M\*\*

These objects are used in existing BCU 1 and BCU 2 based devices instead of the object „Normal Operation Mode“ OMN. The manufacturer has to explain in the corresponding instruction for use which type of operation mode control is implemented.

#### 2.1.5.1 Property PID\_SETPOINT\_VALUE\_BASIC

**BSV**

Unit:	°C
Range:	min. 15 ... 25
Default Value:	-
Communication Object/Parameter:	C
Input/Output:	I
R/W Rate	< 10/day
Description:	This is the basic setpoint value for the comfort operation mode. This value should be saved in case of device reset (e.g. busvoltage failure). If not, the default value parameter shall be implemented and evaluated after restart. See 2.1.5.15.

**2.1.5.2 Property PID\_SETPOINT\_VALUE\_CORRECTION****SCV**

Unit: K  
 Range: min. -3 K .. + 3 K  
 Default Value: 0  
 Communication Object/Parameter: C  
 Input/Output: I  
 R/W Rate < 10/day  
 Description: The setpoint correction value allows the user of the room to modify the setpoint temperature to a higher or lower value in the range between upper and lower limits. See 2.1.5.16 and 2.1.5.17.  
 The setpoint correction is recommended to be saved in case of busvoltage failure.  
 Remark for the sender of the SCV-Value:  
 The used EIS 5- format has different resolutions depending of the used exponent. To have a user-friendly resolution in which it is possible to offer steps of 0,1 K and in order to have no problems with rounding it is recommended to use the exponent 1 (resolution 0,02K).

**2.1.5.3 Property PID\_OPERATION\_MODE\_NORMAL****OMN**

Unit: -  
 Range: 1 ... 4; 0 not allowed (see 3.1)  
 Default Value: free  
 Communication Object/Parameter: C  
 Input/Output: I  
 R/W Rate < 10/day  
 Description: This input is used to set the operation mode. This value should be saved in case of device reset (e.g. busvoltage failure). If not, the default value parameter shall be implemented and evaluated after restart. See 2.1.5.25.

**2.1.5.4 Property PID\_OPERATION\_MODE\_OVERRIDE****OMO**

Unit: -  
 Range: 0 ... 4 (see 3.1)  
 Default Value: auto  
 Communication Object/Parameter: C  
 Input/Output: I  
 R/W Rate < 10/day  
 Description: This input is used to force the operation mode. If it is set to "Auto" the forcing is inhibited. In the other case the given operation mode is forced.  
 See **Error! Reference source not found..**

**2.1.5.5 Property PID\_WINDOW\_STATUS****WS**

Unit: -  
 Range: 0; 1 (see 3.3)  
 Default Value: 0  
 Communication Object/Parameter: C  
 Input/Output: I  
 R/W Rate < 10/day  
 Description: This input is used to switch over to frost/heat protection mode as long as the window is open. See 2.1.5.22 and 2.1.5.23.

**2.1.5.6 Property PID\_ROOM\_PRESENCE\_STATUS****RPS**

Unit:	-
Range:	0; 1 (see 3.3)
Default Value:	0
Communication Object/Parameter:	C
Input/Output:	I
R/W Rate	> 10/day
Description:	<p>This input can be used if a presence detector or a presence pushbutton is installed in the room. Depending on the used component for presence signalling (UCPS: 2.1.5.28) two different functions are possible.</p> <p>1. A presence detector is installed: It switches over from the set operation mode (see 2.1.5.3) to comfort mode and vice versa.</p> <p>2. A presence push button is installed: This input switches over from standby mode to comfort mode and vice versa or from economy (night) mode respectively frost/heat protection mode to comfort mode for a limited time (comfort mode prolongation). See 2.1.5.29.</p>

**2.1.5.7 Property PID\_COMFORT\_MODE****CM**

Unit:	-
Range:	0; 1 (see 3.3)
Default Value:	0
Communication Object/Parameter:	C
Input/Output:	I
R/W Rate	> 10/day
Description:	<p>This input is used to switch to comfort mode if this object is set to „1“</p> <p>This input may be used together with the objects „standby mode“ SM ; „economy mode“ EM and „frost/heat Protection mode“ FHPM instead of the object „Normal Operation mode“ OMN</p>

**2.1.5.8 Property PID\_STANDBY\_MODE****SM**

Unit:	-
Range:	0; 1 (see 3.3)
Default Value:	0
Communication Object/Parameter:	C
Input/Output:	I
R/W Rate	> 10/day
Description:	<p>This input is used to switch to standby mode if this object is set to „1“</p> <p>This input may be used together with the objects „comfort mode“ CM ; „economy mode“ EM and „frost/heat Protection mode“ FHPM instead of the object „Normal Operation mode“ OMN</p>

**2.1.5.9 Property PID\_ECONOMY\_MODE****EM**

Unit: -  
Range: 0; 1 (see 3.3)  
Default Value: 0  
Communication Object/Parameter: C  
Input/Output: I  
R/W Rate > 10/day  
Description: This input is used to switch to economy mode if this object is set to „1“  
This input may be used together with the objects „comfort mode“ CM,  
standby mode“ SM and „frost/heat Protection mode“ FHPM instead of the  
object „Normal Operation mode“ OMN

**2.1.5.10 Property PID\_FROST/HEAT\_PROTECTION\_MODE****FHPM**

Unit: -  
Range: 0; 1 (see 3.3)  
Default Value: 0  
Communication Object/Parameter: C  
Input/Output: I  
R/W Rate > 10/day  
Description: This input is used to switch to frost/heat protection mode if this object is  
set to „1“ This input may be used together with the objects „comfort  
mode“ CM, „standby mode“ SM and „economy mode“ EM instead of the  
object „Normal Operation mode“ OMN

**2.1.5.11 Property PID\_SETPOINT\_VALUE\_ACTUAL\_TEMPERATURE\_HEATING****ATSVH**

Unit: °C  
Range: min. 5 ... 25  
Default Value: -  
Communication Object/Parameter: C  
Input/Output: O  
R/W Rate < 10/day  
Description: This communication object contains the actual value of the room  
temperature setpoint for heating, depending on the actual operation mode.  
See **Error! Reference source not found..**

**2.1.5.12 Property PID\_SETPOINT\_VALUE\_ACTUAL\_TEMPERATURE\_COOLING****ATSVC**

Unit: °C  
Range: min. 20 ... 35  
Default Value: -  
Communication Object/Parameter: C  
Input/Output: O  
R/W Rate < 10/day  
Description: This communication object contains the actual value of the room  
temperature setpoint for cooling, depending on the actual operation mode.  
See **Error! Reference source not found..**

**2.1.5.13 Property PID\_OPERATION\_MODE\_STATUS****OMS**

Unit: -  
Range: -  
Default Value: -  
Communication Object/Parameter: C  
Input/Output: O  
R/W Rate < 10/day  
Description: This communication object contains the actual operation mode.  
Coding see 3.1.

**2.1.5.14 Property PID\_ROOM\_TEMPERATURE\_SETPOINT\_STATUS****RTSST**

Unit: -  
Range: -  
Default Value: -  
Communication Object/Parameter: C  
Input/Output: O  
R/W Rate < 10/day  
Description: This communication object contains the status of the RTS-controller. Coding see 3.2.

**2.1.5.15 Property PID\_BASIC\_SETPOINT\_RESTART****BSR**

Unit: °C  
Range: min. 15 ... 25  
Default Value: free  
Communication Object/Parameter: P  
Input/Output: R/W  
R/W Rate << 1/day  
Description: This parameter serves as default value for the basic setpoint value after restart.

**2.1.5.16 Property PID\_SETPOINT\_CORRECTION\_UPPER\_LIMIT****ULSC**

Unit: 0,1 K  
Range: 0 .. min. 30  
Default Value: free  
Communication Object/Parameter: P  
Input/Output: R/W  
R/W Rate << 1/day  
Description: This parameter limits the setpoint correction to a maximum value (e.g. + 3 K).

**2.1.5.17 Property PID\_SETPOINT\_CORRECTION\_LOWER\_LIMIT****LLSC**

Unit: 0,1 K  
Range: 0 ..min. -30  
Default Value: free  
Communication Object/Parameter: P  
Input/Output: R/W  
R/W Rate << 1/day  
Description: This parameter limits the setpoint correction to a minimum value (e.g. - 3 K).

**2.1.5.18 Property PID\_VALUE\_STANDBY\_REDUCTION****SRV**

Unit: 0.1 K  
Range: 0..min. -30  
Default Value: free  
Communication Object/Parameter: P  
Input/Output: R/W  
R/W Rate << 1/day  
Description: This value is used for the correction of the comfort setpoint value in order to save energy in the standby mode. It is used to calculate the ATSVH. See **Error! Reference source not found..**

**2.1.5.19 Property PID\_VALUE\_STANDBY\_INCREASE****SIV**

Unit: 0.1 K  
Range: 0 .. min. 30  
Default Value: free  
Communication Object/Parameter: P  
Input/Output: R/W  
R/W Rate << 1/day  
Description: This value is used for the correction of the comfort setpoint value in order to save energy in the standby mode. It is used to calculate the ATSVH. See **Error! Reference source not found..**

**2.1.5.20 Property PID\_VALUE\_ECONOMY\_REDUCTION****ERV**

Unit: 0.1 K  
Range: 0 ..min. -60  
Default Value: free  
Communication Object/Parameter: P  
Input/Output: R/W  
R/W Rate << 1/day  
Description: This value is used for the correction of the comfort setpoint value in order to save energy in the economy (night) mode. It is used to calculate the ATSVH. See **Error! Reference source not found..**

**2.1.5.21 Property PID\_VALUE\_ECONOMY\_INCREASE****EIV**

Unit: 0.1 K  
Range: 0 .. min. 60  
Default Value: free  
Communication Object/Parameter: P  
Input/Output: R/W  
R/W Rate << 1/day  
Description: This value is used for the correction of the comfort setpoint value in order to save energy in the economy (night) mode. It is used to calculate the ATSVH. See **Error! Reference source not found..**

**2.1.5.22 Property PID\_SETPOINT\_VALUE\_PROTECTION\_FROST****FPSV**

Unit: °C  
Range: min. + 5 °C  
Default Value: free  
Communication Object/Parameter: P  
Input/Output: R/W  
R/W Rate << 1/day  
Description: This value is used as setpoint value in order to protect the building in the frost/heat protection mode. It is used to calculate the ATSVH. See **Error! Reference source not found..**

**2.1.5.23 Property PID\_SETPOINT\_VALUE\_PROTECTION\_HEAT****HPSV**

Unit: °C  
Range: min. + 35 °C  
Default Value: free  
Communication Object/Parameter: P  
Input/Output: R/W  
R/W Rate << 1/day  
Description: This value is used as setpoint value in order to protect the building in the frost/heat protection mode. It is used to calculate the AT SVC. See **Error! Reference source not found..**

**2.1.5.24 Property PID\_TYPE\_OF\_OPERATION\_MODE\_CONTROL****TOMC**

Unit: -  
Range: 0 ... 2  
Default Value: free  
Communication Object/Parameter: P  
Input/Output: R/W  
R/W Rate << 1/day  
Description: This parameter defines the used type of operation mode control. See 3.6

**2.1.5.25 Property PID\_OPERATION\_MODE\_RESTART****OMR**

Unit: -  
Range: 1 ... 4; 0 not allowed  
Default Value: free  
Communication Object/Parameter: P  
Input/Output: R/W  
R/W Rate << 1/day  
Description: This parameter defines the default operation mode after restart.

**2.1.5.26 Property PID\_HEATING\_COOLING\_DEADBAND****DBHC**

Unit:	0.1 K
Range:	min.: 10 ... 30 (positive values only)
Default Value:	free
Communication Object/Parameter:	P
Input/Output:	R/W
R/W Rate	<< 1/day
Description:	This parameter shall guarantee, that heating and cooling mode can not be active at the same time, if the controller can switch automatically over from heating to cooling mode and vice versa. If the RTS only supports heating or cooling mode the deadband should be set unchangeable to zero. In this case the basic setpoint is the setpoint for the comfort mode.

**2.1.5.27 Property PID\_DEADBAND\_POSITION****PDB**

Unit:	-
Range:	0,1
Default Value:	free
Communication Object/Parameter:	P
Input/Output:	R/W
R/W Rate	<< 1/day
Description:	This parameter defines whether the deadband has a symmetrical or an asymmetrical position to the actual setpoint at comfort mode. See 3.3 and 2.1.2 Table 1 and Table 2

**2.1.5.28 Property PID\_PRESENCE\_SIGNALLING\_COMPONENTS****UCPS**

Unit:	-
Range:	-
Default Value:	free
Communication Object/Parameter:	P
Input/Output:	R/W
R/W Rate	<< 1/day
Description:	This parameter is used to define whether a presence push button or a presence detector is used or not.

**2.1.5.29 Property PID\_COMFORT\_MODE\_PROLONGATION****CMP**

Unit:	minutes ("0" = no prolongation)
Range:	min. 30 ... 60 minutes
Default Value:	free
Communication Object/Parameter:	P
Input/Output:	R/W
R/W Rate	<< 1/day
Description:	This parameter determines the time of comfort mode prolongation.

**2.1.5.30 Property PID\_ACTUAL\_SETPOINT\_TRANSMIT\_DELTA****DTASV**

Unit:	K ("0" = no transmission)
Range:	min. 0.5 ... 1 K
Default Value:	free
Communication Object/Parameter:	P
Input/Output:	R/W
R/W Rate	<< 1/day
Description:	The actual setpoint value will be transmitted automatically if the difference between old and new setpoint value is greater than the given delta value. It will not be transmitted automatically, if the delta value is set to "0".

**2.1.5.31 Property PID\_ACTUAL\_SETPOINT\_TRANSMIT\_CYCLE****CTASV**

Unit:	minutes ("0" = no transmission)
Range:	min 0; 15 ... 60 minutes
Default Value:	free
Communication Object/Parameter:	P
Input/Output:	R/W
R/W Rate	<< 1/day
Description:	The actual setpoint value will be transmitted cyclically after the given cycle time. It will not be transmitted cyclically, if the cycle time is set to "0".

### 3 Datapoint Types

#### 3.1 Datapoint Type "Operation Mode"

<u>Format:</u>	1 octet		
	<div>00000MMM</div>		
<u>Encoding:</u>	See below		
<u>Range:</u>	M = {1 ... 4}		
<u>Unit:</u>	-		
<b>Datapoint Types</b>			
<u>Code:</u>	<u>Symbol:</u>	<u>Encoding:</u>	
<td>	OMN	1	Comfort Mode
		2	Standby Mode
		3	Economy Mode (= Night Mode)
		4	Frost- and Heat Protection Mode
<td>	OMO	0	Auto
		1	Comfort Mode
		2	Standby Mode
		3	Economy Mode (= Night Mode)
		4	Frost- and Heat Protection Mode

#### 3.2 Datapoint Type "Room Temperature Setpoint Status"

<u>Format:</u>	1 octet	
	<div>00000CBA</div>	
<u>Encoding:</u>	See below	
<u>Range:</u>	A = {0,1} B = {0,1} C = {0,1}	
<u>Unit:</u>	See below	
<b>Datapoint Types</b>		
<u>Code:</u>	<u>Symbol:</u>	<u>Encoding:</u>
<tbtd>	<tbtd>	A: Comfort Mode Prolongation <tbtd> B: Presence See 3.3 C: Window open. See 3.3

### 3.3 Datapoint Types “Boolean”

<u>Format:</u>	1 bit		
	<div>V</div>		
<u>Encoding:</u>	See below		
<u>Range:</u>	V = {0,1}		
<u>Unit:</u>	-		
<b>Datapoint Types</b>			
<u>Code:</u>	<u>Type</u>	<u>Encoding:</u> V = 0	V = 1
<td>	RPS	Absence	Presence
<td>	WS	Window closed	Window open
<td>	CM	Comfort mode OFF	Comfort mode ON
<td>	SM	Standby mode OFF	Standby mode ON
<td>	EM	Economy mode OFF	Economy mode ON
<td>	FHPM	Frost/Heat protection mode OFF	Frost/Heat protection mode ON
<td>	PDB	Symmetrical (see 2.1.2 Table 1)	Asymmetrical (see 2.1.2 Table 2)

### 3.4 Datapoint Type "8-bit unsigned integer with special function for zero"

<u>Format:</u>	1 octet			
	<div>WWWWW</div>			
<u>Encoding:</u>	See below			
<u>Range:</u>	V = [0...255] binary encoded			
<u>Unit:</u>	See below			
<b>Datapoint Types</b>				
<u>Code:</u>	<u>Symbol:</u>	<u>Encoding:</u>	<u>Range:</u>	<u>Unit:</u>
<td>	<td>	"time"	1...255 0 = corresponding function disabled	1 min
<td>	<td>	"temperature"	1...255 0 = corresponding function disabled	0.1 K

This format is only for parameters

### 3.5 Datapoint Type "8-bit signed integer"

<u>Format:</u>	1 octet			
	<div>VVVVVVVV</div>			
<u>Encoding:</u>	See below			
<u>Range:</u>	V = [-128 ... 127] binary encoded			
<u>Unit:</u>	See below			
<b>Datapoint Types</b>				
<u>Code:</u>	<u>Symbol:</u>	<u>Encoding:</u>	<u>Range:</u>	<u>Unit:</u>
5.020	DPT_TempHVACRel8	"temperature"	-128...127	0.1 K

This format may not be used for absolute temperatures, it may only be used for parameters

### 3.6 Datapoint Type "2-Bit enumerated"

<u>Format:</u>	2 bits		
	<div>CC</div>		
<u>Encoding:</u>	See below		
<u>Range:</u>	See below		
<u>Unit:</u>	-		
<b>Datapoint Types</b>			
<u>Code:</u>	<u>Type</u>	<u>Encoding:</u>	
<td>	UCPS	CC 00b    None 01b    Presence Push Button 10b    Presence Detector 11b    (Invalid)	
<td>	TOMC	CC 00b    OMN is used 01b    CM, EM, FHPM is used 10b    CM, SM, EM, FHPM is used 11b    (Invalid)
